

ENVIRONMENT POLICY STATEMENT

Environment Policy Purpose:

Airport international group **ENVIRONMENT** Policy underscores its commitment to promote and encourage positive practices towards the environment and whenever possible going beyond the minimum regulatory requirements.

Our Airport Operations are implemented with the utmost care to reduce the environment footprint from the airport activity.

Our airport activities follow an integrated management system consisting of processes, policies and procedures, ensuring our compliance with the laws and regulations applicable to our operations and in accordance with our corporate strategies.

Scope of this policy

Airport International Group Environment Policy is implemented across all areas of operations including those related to suppliers, contractors, and stakeholders.

Airport International Group is committed to

- Adhering to Jordan's local regulations and top international practices implemented at prestigious global entities - such as the IFC, EBRD and MIGA - relating to Environment.
- Setting and reviewing Environmental objectives to be aligned with the company's strategic objectives.
- Preventing pollution from the airport's operations on the environment, by developing and implementing a robust environment management system.
- Maintaining Carbon neutrality and committing to achieve Net Zero Carbon emissions by 2050.
- Controlling air pollution sources, and continuously monitoring of air quality at the airport to ensure compliance with national and international requirements.
- Acknowledging Climate change as a scientific fact and adapting measures towards reducing its negative impacts
- Implementing a waste management system that minimizes, segregates, and recycles the airport solid waste.
- Supporting applicable United Nations (UN) Sustainable development goals (SDGs), focusing on SDG 13(Climate Change) and adapting the measures to support this goal.
- Promoting an environment friendly culture amongst the Airport staff encouraging them to propose environmental initiatives.
- Communicating and promoting our environmental commitment to interested parties, contractors and stakeholders in a manner that considers the environment within their management systems and whenever applicable reflect it in a contractual manner.
- Preventing all kinds of pollution emitting from the airport activities including but not limited to water, soil, and air pollution.
- Integrating the environment criteria in our procurement process whenever applicable, in order to use and offer low impact product and services
- Considering Environmental aspects in future development projects at design, construction, and operational phases to reduce overall environmental footprint of our activity, with a lifecycle approach
- Implementing a water management system that considers the scarcity of this vital resource and ensures a sustainable potable water sources at the airport by implementing a solid sustainable water saving action plan.
- Adopting Energy efficient measures and whenever possible utilizing low impact and renewable energy sources and reduce overall consumptions by 20% in the year 2030.
